

ZenStar™ Install Guide

The ZenStar comes pre-assembled and ready-to-hang. Acoustic Design Lab recommends light gauge aircraft cable with gated gripper hooks for fast, secure suspension and easy leveling. The custom aluminum framework is 2 lbs lighter than the competition's steel frame and abutted elements are mechanically connected via matching aluminum connectors. Quick, lightweight and safe installs using thicker and more durable 12mm Acoustic Design Lab's PET panels ensure best-execution for your project. Designed to be installed in clusters, full coverage groupings, rows and floating as solo elements on one plane or at varying heights. ZenStar can be custom ordered with digital print, silkscreen, LED lighting and perforations for sprinklers, lights and other overhead elements. ADL does custom!

CUSTOM SIZES ◻ CUSTOM COLOR MIX ◻ CUSTOM PRINTING ◻ CUSTOM PERFORATIONS

Acoustic Testing:
ASTM C423 NRC 0.36 (as Type A)
SAA Testing / Sabin Calculation

Fire Rating:
ASTM E84 Class C (available with Class A treatment)
Inherent Class A available with new 2020 Colors in New Sheet Sizes
European Fibers / North American Production / NAFTA Compliant
