

WHAT IS BALANCED BASS

.....most thinner and hollow acoustic products do a great job at absorbing and reducing the upper end of the human voice range (think high pitch voices & sharp sounds like claps, this can leave small rooms feeling hollow) Balance Bass provides broad-spectrum absorption including the mid and lower frequencies.

WHY BALANCED BASS

..... performance, balance and peace of mind. If your project requires premium sound control, let Acoustic Design Lab collaborate with your team!

HOW TO BALANCE YOUR BASS

..... similar to HPxNRC, Balanced Bass acoustic products will have greater depth, thickness, mass and the ability to layer in variable density acoustic materials. We work with the most respected and enduring Acoustic Testing Facility in the US to ensure our products exceed your requirements.
